RECEIVED
JUL 21 1990

Honorable William K. Reilly
Administrator, Environmental Protection Agency
401 "M" Street, Southwest
Washington, D.C. 20460

Dear Mr. Reilly:

Air pollution is a major problem in our area and throughout the Country. It is therefore crucial that every effort be made to explore ways to improve air quality. It has come to my attention that a gasoline performance additive called HiTEC 3000 may play a role in reducing automotive emissions. Even though other air emission reduction technologies are being proposed, I feel we should explore ALL available alternatives.

This additive seems to significantly reduce smog-producing nitrogen oxide, as well as overall tailpipe emissions. I understand that the additive is readily available and compatible with the reformulated fuels being considered for widespread use in this Country.

It is of the utmost importance that we find ways to reduce air pollution, and this additive may be part of the answer. I hope that the Environmental Protection Agency gives HiTEC 3000 prompt consideration for use in this Country.

Sincerely,

George C. Hasay
